 Delivery status	 Wiring	 Clamping
The device is supplied with a preloaded spring. The switching status of the preloaded terminal point is indicated by the position of the pusher.	The stripped wire can be easily and securely inserted into the terminal point without any further preparation.	When the wire touches the ground contact of the terminal, the spring of the clamping point is released and shoots the terminal. This changes the position of the pusher and a clear 'click' can be heard.

Reliability benefits the whole customer journey

Testing	Operation	Maintenance
		
Measuring point of each connection	Maintenance-free clamping technology	One-handed unwiring
Ideal for final acceptance tests as well as maintenance & service 	Robust against vibrations and shocks  	First reset all pushers. Then all wires can then be removed without using any force.
